

UniversalBusinessListing.org - Instructions for Local Server API:

We have the following files for Local API version.

1. customer_details.sql
2. db_connect.php
3. export.php
4. functions.php
5. universal.php
6. universal_document.php
7. universalcon.php

i) First client needs to create a database and execute the sql query contains in customer_details.sql

ii) Place all the files in the project folder except customer_details.sql

iii) Open db_connect.php and edit the following values

```
//To define database connection details
```

```
define("HOST_NAME", "localhost"); //Name of the Host
```

```
define("MYSQL_USER", "root"); //MYSQL User Name
```

```
define("MYSQL_PASSWORD", "admin"); //MYSQL Password
```

```
define("DATABASE_NAME", "universal"); //Name of the Database
```

iv) Open the file universal.php to run the data entry page.

v) To export all the listings run the page export.php
